Dear Mr Mark Bentley

Re: Survival Liquid Tyre Sealant

We have analysed Survival Liquid Tyre Sealant (Survival) and the Chemical Makeup thereof. On completion of the analysis we concluded the following:

- 1) Survival will not have any adverse effect on the performance of any pneumatic tyre, as it contains no water in its Chemical makeup.
- 2) The tyre pressures should remain more consistent as it bonds to the entire casing of the tyre, possibly ensuring a longer overall tyre life under normal operating conditions.
- 3) We believe the use of Survival can assist in reducing the life cycle cost of tyres.

Yours faithfully
