

KAREE MINE
K4 SINKING PROJECT

Memo to: Mr. M Du Plessis
From: Dolf Reyneke
Date: 31 March 2004
Re: **SURVIVAL LIQUID TYRE SEALANT**

Dear Sir

We started with the usage of the liquid tyre sealant on Karee mine K4 Vent shaft on the LHD's underground. The product has performed to our expectations, thus saving ourselves huge costs on tyre repairs and down time. In two months while using the product we have had no problems with penetrations. Because of the glycol in the chemical makeup of the product we have also experienced the tyres to run cooler, with the benefit of getting better tyre life (Another cost saving).

We are satisfied with the service and target dates that is been agreed on with the supply and availability of the product (Survival Liquid Tyre Sealant).

If you need any additional information please contact me at 082 7711 832.

Yours in SFT (STOP FATALS TOTALLY)
