LIQUID SEALANT IN TYRES

Page 1 of 1

In February 1999 a SVM Jeep's tyres were filled with the Survival product as a test. This vehicle was used under the normal circumstances every day. The first puncture on this vehicle occurred on 13 June 2000, ie. In use for \pm 16 months without a puncture.

I think the results have proven that the product is a success and I will recommend it to anybody who might still have doubts about it.

Thank you

B NAUDÉ
