To whom it may concern,

This serves to confirm that Max T Solutions have tested the Survival Puncture Proofing system and found it to have no adverse effects, and are suitable for use on radial and cross ply tyres in the Sub Saharan market. Also being that Survival is one of but a few non water based puncture proofing systems it has shown no evidence of corrosion between the belt construction of the tyres tested.

As we are all well aware and which is still a fact is that no puncture proofing system is currently endorsed by any new tyre manufacturer, we can with confidence say that Survival are making massive strides in correcting the misconceptions of the past regarding previous puncture proofing systems.

We as Max T Solutions have added Survival Puncture Proofing to our current range of customer solutions packages to assist customers in harsh operating conditions to drive down their cost and also overall down time.

We also would like to thank Sally and her team for a job well done.

Regards,

George Moore
