Pretoria

Attention: Sally Fisher

Re: Survival

Dear Sally,

We started testing Survival on one of our ADT's (TT47) in June 2009 and studied the average production hours on this machine since then. The down time as a result of punctures on this machine has been significantly reduced since your product was installed.

As a result of the positive tests we have decided to implement Survival in all our vehicles as new tyres are fitted.

We would recommend the use of Survival to any Company who rents out machines or where production is critical to their revenue stream.

Kind Regards

Deon van Rensburg
Director
